Not illustrated. 1887 edition.

Excerpt: .his system into practical use attracted the attention of inventors in Europe and America, and many efforts were made to reduce his idea to practice. Several improvements in his scheme were patented in Europe and in this country, but it was not until 1872 that a really trustworthy system was devised. Mr. Joseph B. Stearns of Boston had been engaged for several years previous to this date in experiments on simultaneous transmission, or, as he called it, duplex telegraphy. In principle his apparatus did not materially differ from that of his predecessor and contemporaries, and until 1872 his success was not more marked than theirs. Early in this year he introduced the condenser 1 into what is known as the artificial or compensating line, thus overcoming the only serious obstacle to success. The great value of his improvement was quickly appreciated, and to Mr. Stearns...
