Excerpt from Rational Arithmetic Complete Rational Arithmetic is intended for use in business colleges and in commercial high schools, by pupils who have completed the equivalent of the eighth or ninth grade in the public school system. While deficiencies of early training may be remedied by its use, it is not intended as a textbook for those who are approaching the subject for the first time. Neither is it intended to take the place of any of the many excellent works now in use in the grades for the purpose of developing a general understanding of mathematical principles. Such books, while they have satisfactorily discharged this function, have failed to develop the accuracy and facility so vitally essential in commercial calculations. Other commercial arithmetics have tried to overcome this weakness by following similar plans of instruction in abridged form. Rational Arithmetic follows a very different plan. It is purely a vocational work and aims to teach the how rather than the why. It is a reference book of commercial operations, rather than a method of presentation, and should be so used. Part One is a collection of practice exercises arranged along the lines of the generally accepted order of presentation. Part Two contains illustrated solutions covering the entire range of commercial arithmetic as generally understood. The methods used are those of business. The explanations are expressed in language which may be understood easily, rather than in the more scholarly language usually employed.
